

Effective Air Quality Treatment For Commercial Buildings

Energy Efficient IAQ Treatment Technology

THE FridgeWize ADVANTAGE

- **FRIDGEWIZE WARRANTY**

These ionizers come with a 3-year warranty.

Needlepoint bi-polar ionization has been used in commercial buildings for many years. Hospitals, arenas, airports have seen positive benefits using this technology in improving their indoor air quality environments.

These work in creating positive and negative ions which attacks pathogens, VOC's, smoke, allergens. These ions are created by breaking down the water in the air. The positive and negative ions attack pathogens by taking out their hydrogen element. This effectively inactivates the pathogens.

These bi-polar ionizers also help reduce the VOC, smoke, allergens by charging these particles and clumping them together. Together with your HVAC filter, they are captured and taken out of the air stream.

These ions are also created without any harmful levels of ozone. Also, the bi-polar ionizers are maintenance free and its effectiveness does not fluctuate with lower temperatures like UV-C based systems. No bulbs to ever replace.

When coupled with our energy efficient supply fan electric motor solutions and higher rated MERV filters, this provides commercial businesses with effective IAQ solutions while lowering their energy consumption.

- **EFFECTIVE AGAINST PATHOGENS**

Proven to kill pathogens in the air and on surfaces through independent lab testing.

- **CONTROLS HARMFUL VOC's**

Needlepoint bi-polar ionization proven to eliminate VOC's and odors to help create a safe.

- **REDUCES ALLERGENS**

Keeps allergens to a minimum by clumping allergens together to be able to filtrate through HVAC filters.

- **LOW MAINTENANCE**

Patented self-cleaning design will provide you with years of maintenance free operation. No tube to be replaced like similar UV-C based systems.

- **EASY INSTALLTION**

Installs easily into existing HVAC units. Whether it is in split air handlers, furnaces, or packaged rooftop units.

- **CLEANS EVAPORATIVE COIL**

Reduces the amount of biomaterial that is collected onto the surface of the evaporator coil. Allowing for your AC and heat to work more efficiently.
